

# ARDC Party Infrastructure Project Home

The Australian Research Data Commons (ARDC) Party Infrastructure Project is a [National Library of Australia \(NLA\)](#) project funded by the [Australian National Data Service \(ANDS\)](#). The project aims to enable improved the discovery of research outputs and data through persistently identifying Australian researchers and research organisations.

Work on this project will focus on adapting the NLA's [People Australia](#) infrastructure to enable authority control for research outputs and for data. As such it will encourage better management and curation of data generated by Australian research and supports the long-term access, use and re-use of this data.

A detailed description of the ARDC Party Infrastructure is available in the files attached to the [ARDC Party Infrastructure Project overview](#) page.
